

# Deep Learning Milestone 3

Group 11:  
Kristian Ruth  
Mauro Simoes  
Leyi Qiang

# Introduction

- **Insight Emotion:** Customer feedback management application, analyzing sentiment of feedback, trends, and discussion topics to provide value to businesses
- **Deep Learning component:** Sentiment analysis and classification, positive/negative, and emotion labels, helping to understand how customers are reacting to products
- **The model & data:** ELECTRA-Small discriminator, fine-tuned on Google's GoEmotions dataset

TODAY: Demo of UI, Analysis, and Dashboard; Docker configuration

# Github Repo

- <https://github.com/leyiUPM/emotion/tree/main>
- Three main components: web/ (Next.js frontend), backend/ (FastAPI with loaded model), and training script

Covered in `README.md`:

- **Training a model:** Run training script `run_and_export.py`
- **Running Docker:** `docker compose up --build`
- **Running locally:**
  - Backend:
    - `pip install -r requirements.txt`
    - `uvicorn app:app --reload --port 8000`
  - Frontend:
    - `npm install`
    - `npm run dev`

## Emotion Insight

Made by Group 11. Fine-tuned ELECTRA on GoEmotions dataset.

**Analyze**  
Run emotion detection

**Dashboard**  
Charts and summaries

**Explore**  
Search and filter feedback

**Analyze feedback**  
Run emotion detection on a single comment, or batch multiple lines

Threshold 0,2 Top K 5

**Single comment**

I love the new features, but the rollout was messy and communication was disappointing.

**Run** **Clear**

**Batch (one comment per line)**

I'm thrilled — this new feature is amazing and I love using it.  
I'm furious because the update deleted my settings and wasted my time.  
I'm anxious to use this now; I'm afraid it will crash again.  
I'm relieved the issue is finally fixed. Thank you.  
I'm disappointed — I expected much better quality from this release.  
This is disgusting and unacceptable. I feel sick reading this message.

I love the new features, but the rollout was messy and communication was disappointing.

love 0.66

That was rude and insulting. I feel offended by the response.

annoyance 0.31 anger 0.31

I feel lonely using this app; it's hard without any real support.

sadness 0.35

I regret upgrading — it was a mistake and I shouldn't have done it.

# Docker

# Frontend

```
# ---- deps ----
FROM node:20-alpine AS deps
WORKDIR /app
COPY package.json package-lock.json* ./
RUN npm ci

# ---- build ----
FROM node:20-alpine AS build
WORKDIR /app
COPY --from=deps /app/node_modules ./node_modules
COPY . .
RUN npm run build

# ---- run ----
FROM node:20-alpine AS run
WORKDIR /app
ENV NODE_ENV=production

# Next.js needs these at runtime
COPY --from=build /app/package.json ./package.json
COPY --from=build /app/next.config.mjs ./next.config.mjs
COPY --from=build /app/.next ./next
COPY --from=build /app/node_modules ./node_modules

EXPOSE 3000
CMD ["npm", "run", "start", "--", "-p", "3000"]
```

We use a multi-stage build for the frontend:

- Smaller final image: Only includes production artifacts
- Layer caching : Faster rebuilds when dependencies don't change

# Backend

```
FROM python:3.11-slim

# Avoid Python buffering so logs show up immediately
ENV PYTHONUNBUFFERED=1          PIP_NO_CACHE_DIR=1

WORKDIR /app

# Install deps
COPY requirements.txt /app/requirements.txt
RUN pip install --upgrade pip && pip install -r requirements.txt

# Copy app code and model artifacts
COPY app.py /app/app.py

EXPOSE 8000

# Run the API
CMD ["uvicorn", "app:app", "--host", "0.0.0.0", "--port", "8000"]
```

- Python:3.11-slim: Lightweight Python image (~150MB)
- PYTHONUNBUFFERED=1: Logs appear immediately (no buffering)
- PIP\_NO\_CACHE\_DIR=1: Reduces image size by not caching pip packages
- Runs FastAPI with Uvicorn server

# Compose

```
services:
  backend:
    build:
      context: ./backend
      platform: linux/amd64
    ports:
      - "8000:8000"
    volumes:
      - ./backend/model:/app/model:ro

  web:
    build:
      context: ./web
      platform: linux/amd64
    environment:
      - MODEL_API_URL=http://backend:8000
    ports:
      - "3000:3000"
    depends_on:
      - backend
```

- Platform: linux/amd64 to ensure consistent builds
- Volumes: Mounts the ML model folder into the container (read-only bind mount)
- Depends\_on: Ensures the backend starts before the web frontend
- Internal networking: Services communicate via http://backend:8000 (Docker's internal DNS)

# Thank you!
